

A Message from the President...

BY: ROB DINTRUFF

Through all the activities, two key themes stand out above the rest and were presented at our Annual Meeting held on July 19th.

- Water quality and the health of the lake is paramount. Keuka Lake
 is very clean, but it could be even cleaner. We are searching more
 strategically to find entry points for contaminants and ways to
 keep them out of the lake. To achieve this we have enlisted the
 support of limnology experts at the Finger Lakes Institute and
 elsewhere. They have analyzed our water testing data,
 recommended further testing and will guide us on the best course
 of action based upon the results.
- There is much we can do to enlist the support of all who love Keuka Lake. That includes businesses in the region and visitors to the lake, not just those who live here. Reaching these segments requires the KLA to be more visible, helpful and efficient. To that end, we are updating our website, to display local events, special offers from local businesses, weather information and more. Along the way, we can inform visitors of what the KLA does and what they can do to preserve and protect the lake.

Read on to learn more about why we'll soon be saying: "Gee, the fall has gone by quickly".

Welcome Aboard: Nadia Harvieux

Nadia Harvieux, Associate Director for Educational Programs at the Finger Lakes Institute (FLI) of Hobart and William Smith College, is sure to become a familiar face for KLA members. In July, she became FLI's project manager for KLA's water quality programs, providing technical and field support to build KLA capacity within the areas of water quality and education. In this role, Nadia draws on her extensive experience leading citizen science water monitoring programs and developing education initiatives to promote lake stewardship in the Finger Lakes region.

With a Bachelors of Arts degree in Geology from Hamilton College and a Masters degree in science education from Seattle University, Nadia has been creating innovative, fieldbased environmental programs in the Finger Lakes region throughout her career. Since 2013, she has been at the helm of FLI's Education Program, working with associations and regional high schools on a wide range of water quality and education projects, such as FLI's Water Pollution Prevention education series municipalities; Libraries Love Lakes program; Finger Lakes Youth Climate Summit for high school students; and supporting HABs monitoring by lake associations. Prior to joining the FLI, Nadia worked at Finger Lakes Community College as the K-12 Conservation Program Coordinator at Muller Field Station on Honeoye Lake and Adjunct Instructor in the Environmental Conservation Department. Nadia is the proud co-creator of the successful K-12 Watershed Education Program Canandaigua Lake Watershed Association, served on their board of directors from 2007-2020, and helped launch several ongoing citizen science initiatives to engage volunteers in water quality work.

"The opportunity to support the KLA mission is a full circle moment for me," Nadia recently reflected. "Raising awareness of solutions that help our lake and ecosystems thrive engaging association members in the important work of lake stewardship through collective action, these initiatives all make a difference in protecting our treasured Finger Lakes." Joining Nadia in supporting KLA's mission and goals are FLI director, Dr. Lisa Cleckner, as well as the staff of the FLI and Finger Lakes PRISM.

Nadia credits growing up on Canandaigua Lake for sparking her interest in stewardship, education, and protection of the Finger Lakes. If she isn't at the lake, you can find Nadia in her garden, on a hike with her dog, casting on her latest knitting project, or traveling with her husband, David, and their two sons, Oliver and Griffin.

2025 Annual Meeting Highlights

Thank you to all who were able to attend KLA's annual meeting on July 19th. For those who were not there, we heard from two scientific speakers who did a remarkable job addressing concerns the KLA board hears with some regularity:

- 1. How clean is the water?
- 2. How healthy is the sport fish population?

Dr. Dominique Derminio reviewed 30+ years of KLA water testing results. Based on the critical metrics of phosphate and nitrate levels, chlorophyll-a levels and Secchi disc depth, Keuka Lake remains in the desired 'oligotrophic' range. As such, per a DEC report of 2018, it is the second cleanest of the Finger Lakes, after Skaneateles (a more current comparison from the NYS DEC is due out later this year.). These metrics have all improved from the 1990's. That said, in this age of anthropogenic climate change and cyanobacterial blooms, continued vigilance is needed. Since a clean lake is largely driven by how clean its streams are, better understanding our streams is an important next step. Understanding where nutrients are entering the lake is important because future targeted remediation efforts will help keep the lake as clean as it is now, or even improve it.

Alex Koeberle gave the second presentation. He will obtain his PhD from Cornell at the end of this year. His dissertation focuses on the health of the Keuka Lake fish population. Cisco is our traditional bait fish (bait fish are critical link in the lake food chain and are crucial for a healthy sport fish population.). The native cisco population died out here in the 1990's, possibly related to predation by rainbow smelt and nonnative alewife. In the early 2000s the smelt population declined, as did alewife by the mid-2010s. Alex's research indicates 3 possible contributors to this alewife collapse: decreased zooplankton availability possibly due to the impact of zebra and quagga mussels, high predation by the abundant lake trout population, and finally the polar vortex winters of 2014/15. While alewife are currently caught in forage net surveys at much lower levels, their population is likely suppressed by the still abundant lake trout population. This issue with the bait fish population has likely suppressed the size and weight of our lake trout. Next steps include continued attempts by the DEC at increasing the native cisco population utilizing novel stocking strategies.

For those who would like more in-depth information, the slide decks from both these talks are available on the KLA website, along with the 2025 Annual Meeting Minutes.

Water Quality Update

NADIA HARVIEUX. FINGER LAKES INSTITUTE KLA SUPPORT

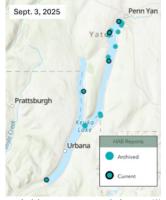

Update on KLA's Harmful Algal Bloom Volunteer Shoreline Surveillance Program

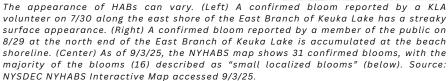

KLA successfully recruited a robust base of member volunteers to monitor 93 unique shoreline zones for the 2025 Harmful Algal Bloom Volunteer Shoreline Surveillance Program. Volunteers committed to weekly monitoring of their zone for the duration of the summer and early fall season. In June, the New York State Department of Environmental Conservation (NYSDEC) provided technical training for KLA volunteers which included visual identification of HABs, submitting observations to the online NYHABS system, health and safety related to HABs, and troubleshooting look-alikes. Of note this season, KLA volunteers were asked to document non-HABs conditions as "No Bloom" reports to help gain a better understanding of HABs in Keuka Lake.

The first confirmed HAB event was observed in multiple shoreline locations along the East Branch of Keuka Lake on July 28th, followed by several consecutive days of additional confirmed HABs reports. During this time, the area experienced high air temperatures and little to no wind conditions, factors favorable for the formation of HABs. Two samples were collected on July 28th, one from the E. Bluff Drive area and the second from West Lake Road area of the East Branch. These samples were transported to the Finger Lakes Institute (FLI) for analysis. The FLI utilizes a bbe Moldaenke fluoroprobe to detect chlorophyll concentrations across several classes of algae including green algae, cyanobacteria, diatoms and cryptophytes. Concentrations of cyanobacteria in the East Bluff Drive and West Lake Road samples were 33.68 ug/L and 42.79 ug/L, respectively, and above the 25 ug/L cyanobacteria concentration

threshold for confirmation of a HAB.

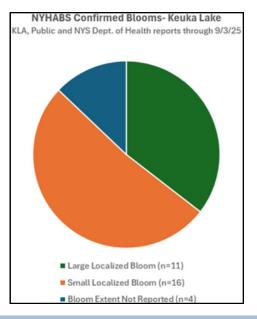

Joining KLA volunteers in reporting HABs through the NYHABS system are municipal beach operators, summer camps, members of the general public, and the NYS Department of Health. Since the onset of the active HABs season, 31 confirmed bloom reports have been documented on Keuka Lake in NYHABS. KLA volunteers reported 20 confirmed blooms, the NYS Department of Health reported 6 confirmed blooms, and the general public reported 5 confirmed blooms. The majority of confirmed blooms were characterized as "Small Localized Blooms".

By late August, there were 409 total Keuka Lake observations submitted via the NYHABS site, of which 383 were "No Bloom" reports. This is great news and we thank KLA volunteers for their efforts in supporting the HABs Volunteer Shoreline Surveillance Program!

AQUATIC INVASIVE SPECIES REMOVAL

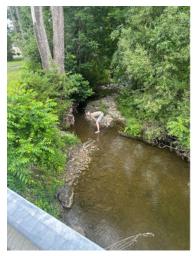

KLA volunteers along with staff from the Finger Lakes Partnership for Regional Invasive Species Management (PRISM) and Yates County SWCD completed two successful Water chestnut pulls in June and August, removing approximately 365 lbs of the invasive aquatic plant

STREAM SAMPLING PROGRAM

KLA stream sampling in partnership with Yates County SWCD and the FLI. Water conditions vary from site to site.

Monthly Keuka Lake sampling with KLA volunteers, Yates County Soil and Water Conservation District and FLI staff. From left to right, KLA Board member Jim Horner, FLI project manager Nadia Harvieux, KLA volunteer Steve Hakes, Yates SWCD Technician Ethan Hall, KLA Board member Anis Fadul, and Yates SWCD Technician Cole Hartman.

LAKE MONITORING

(Left) KLA Board members, Bob Lambert and Steve Sosik, collecting water samples for the NYSDEC Citizens Statewide Lake Assessment Program (CSLAP). (Right) KLA volunteer Ron Stover and FLI Summer Research Intern Lauren McNeill filtering water samples for nutrient testing.

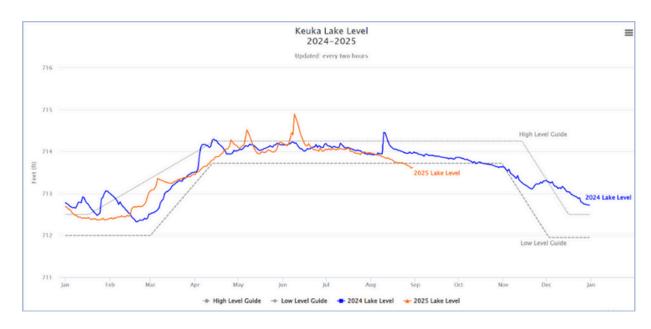

Lake Level Update

NOLAN SMITH, LAKE LEVEL & NAVIGATION/RECREATION COMMITEE CHAIR

As is typical during the late summer, the lake level has fallen below the 'low level guide' due to light rainfall in the season. Gates are properly managed (1 gate at 5" to maintain minimum flow). There has not been talk this year about opening gates to influence flow to help with algae blooms. Temperature trend is tracking per historical averages.

COLD WEATHER BOATING: NYS law requires that anyone on the water on any watercraft less than 21 feet in length - from November 1st to May 1st - must wear a personal flotation device (PFD).

BRIANNA'S LAW IS IN EFFECT: All motor boat operators, regardless of age, need a boating safety certificate.

Approved courses can be found by visiting the <u>NYS Parks and Recreation</u> <u>Dept</u>: <u>https://parks.ny.gov/boating/education.aspx</u>

Boating Laws on Keuka Lake

KLA Members Can Help the Sheriff and Marine Patrol Officers

At the KLA Annual Meeting in July, a panel discussion was held with law enforcement officers from Steuben and Yates counties where two topics were raised that deserve broader attention.

Question 1: Is a boating license required to rent/operate a boat in NYS waters?

Let's start by clarifying the terminology: New York State does not offer a "Boating License". It is a "Boating Safety Certificate". And, yes, a Boating Safety Certificate is required to operate a motorized vessel in New York State waters. But there is some confusion: Anyone searching the Internet for information on this topic will likely find an entry making a blanket statement that a Safe Boating Certificate is required by all who operate a motorized craft. One might also find an entry indicating that an exception is made for those renting a boat if they are given appropriate safety instructions from the rental provider. The internet is not without contradiction.

Our advice: GET YOUR SAFE BOATING CERTIFICATE and encourage others to do the same. A list of courses is available at: https://parks.ny.gov/boating/education.aspx

Question 2: How can the KLA and its members support the Sheriff and Marine Patrol Officers?

To put it simply: Communication. Our annual meeting, website and newsletters like this one can reinforce what boaters need to know. Whether it's about a boating safety certificate, equipment requirements or speed limits, boaters sometimes need a reminder. The KLA has produced signs alerting boaters to the 45 mph speed limit (25 mph at night), along with the restriction of a 5 mph speed limit when operating within 200 feet of a dock, shore or raft.

In at least one instance, such a reminder was made very clear by a neighbor who chose a communication approach of their own, depicted in the photo below. They have our appreciation for their initiative in helping to keep Keuka Lake a safe place for recreation.

And one final note on how members can help: The Sheriff expressed appreciation to those who post their house number on their dock or beachfront where it is visible from the water. When the Marine Patrol Officers get an urgent call, address signs including those that the KLA makes available to members, help them reach a specific location more promptly. You can order a KLA Address Plate with the form on page 12.

Critter Corner

BY: DAVID DECALESTA

Rarely seen, but often heard, the owls of the forested hillsides surrounding Keuka Lake are an important component of the bird community. They perform a real service by controlling rodent populations. Except two rare, winter visitors (Great Grey and Snowy), all are year-round residents. They have exceptional hearing and vision, and their wing feathers are softened at the edges, so they can swoop undetected on prey.

The biggest of the resident owls at 24+ inches tall, the great horned owl frequents small woodlots and nests in abandoned crow or hawk nests. Primary prey is small rodents, but these big owls can capture and kill skunks, opossums, grouse and house cats. Call is a deep, booming hoo, hoo-oo, hoo, hoo at dawn and dusk. Called "Cat Owl" because of its ears

About 2/3 the size of the great horned owl, the long-eared owl is one of three "eared" owls. This owl prefers extensive conifer patches (hemlocks, red and white pine). It nests in old crow and hawk nests and tree cavities. It eats mice, an occasional rabbit, frogs and snakes. Call is a low, moaning hoooo.

Smallest of the eared owls at 8-9 inches, screech owls prefer oak and hardwood forests along streams. They nest in small cavities in medium-sized trees (~15 inches diameter) but use other cavities such as wood duck nest boxes. They eat mice, insects, moths, spiders, snakes and salamanders. Their call is a ghost-like mournful, tremulous, whinnying call.

Called the "monkey-faced" owl, the 16 inch barn owl prefers open meadows and farmlands more than the other owls. It nests in hollow trees, barns and church steeples, generally using the same nest site every year. Like other owls, it feeds on mice and small rodents, but also includes small birds, large bugs, snakes, frogs, and crayfish in its diet. Call is a rasping hiss: kschh.

The barred owl is medium-sized, standing ~ 20 inches tall. Mostly found in dense forest along lakes, streams, and swamps. It nests in tree cavities and old hawk and owl nests, and feeds on medium-sized mammals (squirrels, chipmunks), small birds, snakes and crayfish. Its call is a distinctive, repeated "who cooks for you-aah" and it is often heard during the day.

The northern saw-whet is the smallest of owls (7 inches tall) and also the tamest, allowing people to walk right up to it. Like the barred owl, saw-whets prefer dense forestlands along cedar swamps, streams, and bogs. They nest in natural cavities in trees and eat mice, insects, frogs and snakes. Their call is a mellow whistled note: too, too, too, too.

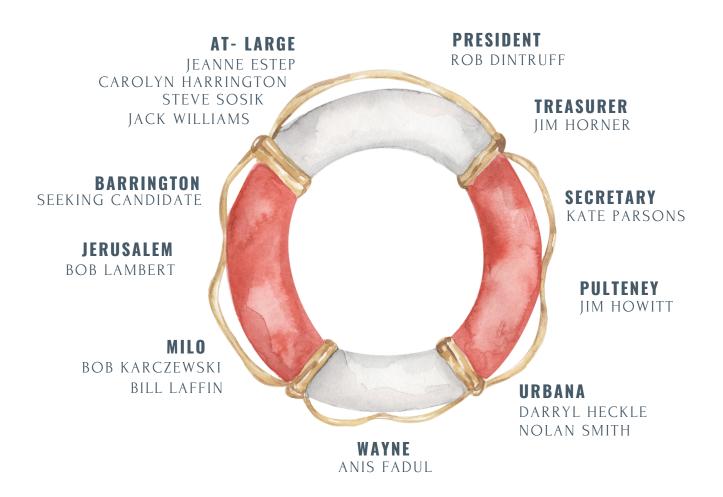

The great gray is the biggest owl (~30 inches tall), but is a rare winter visitor. A year-long resident of Canada's boreal forests of spruce-fir and bogs, it occasionally ventures south as far as Pennsylvania during winter where it is eagerly viewed by birders as an extremely rare bird. The bird is quite tame and will sit for hours in a tree while hundreds of birders snap its picture. Call is a deep, booming whoo-hoo-hoo.

Another rare winter visitor is the 25-inch snowy owl. Normally a bird of the Arctic, it ventures south into northern USA during winter when population density of its dietary staple, the squirrel-sized lemming, crashes and it must seek food elsewhere. This owl is usually silent, except for a repeated krow-ow during the breeding season.

CURRENT KLA DIRECTORS & OFFICERS

Please welcome our newest Directors:

Steve Sosik, Anis Fadul, Carolyn Harrington and Jack Williams!

At our Annual Meeting, we honored three KLA Board Members, whose terms had come to an end:

Sue Oliver, Wayne Hand and Doug DeFranco (not pictured).

We also gave thanks to former KLA President, Steve Brigham. We are grateful for all the hard work these Board Members put into the KLA and wish them the very best on their new chapters. Most of all, we look forward to seeing you all around the lake!
